Webster  **Goes Mobile**
Webster Goes Mobile

Always in Touch

Webster is Australia's number one web application for full function access to diagnostic reports.

It enjoys widespread use on computers in surgeries, hospitals, at home ... in fact, everywhere.

And this will continue.

So what has changed?

Webster has gone mobile

This bulletin announces the arrival of a new generation of handheld devices that combine fast 3G communications with very user-friendly interfaces. They make mobile Webster access a reality.

The images shown demonstrate our Webster application on the recently released Apple iPhone 3G

Its impressive features allow you to open and manipulate reports securely via the Internet¹, with just the touch of a finger, from virtually anywhere ... even while you're on the move.

Webster responds quickly and its friendly and familiar interface is extremely easy to navigate on the large, full-colour Touch screen.

Whether you're at a nursing home or hospital, in a taxi - or even overseas, you're ...

Always in Touch
