

Paediatric Urine Collection

Patient Instructions

Procedure

Before collecting this specimen please obtain a suitable specimen container from one of our collection centres or from your Doctor.

- Make sure the pubic area is clean and dry
- Strip protective paper, exposing adhesive panels/strip
- Apply hole of bag over front passage (female only) or place penis in bag (male) with bladder (longer part) of bag pointing downwards. Press adhesive firmly to skin
- After collecting specimen, take bag off and stick adhesive sides together. Place bag in container provided for transport
- Clearly label container with name, date and time of collection. Send with request form to Laboratory or Doctor's Surgery or closest Collection Centre.
- It is important that we receive collected sample on day it is produced/collected. If any delay refrigerate sample until delivery is possible.

Cautions

- Do not stretch bag after attachment to skin
- Remove bag gently so as not to damage skin
- Discontinue using bag if skin develops symptoms of allergy.
